

# Siddhartha Khanal

Saraswatinagar, Kathmandu | [hello@siddharthakhanal.name.np](mailto:hello@siddharthakhanal.name.np) | [siddharthakhanal.name.np](https://siddharthakhanal.name.np) | [github.com/buffmomoeveryday](https://github.com/buffmomoeveryday) | [linkedin.com/in/siddharthakhanal](https://linkedin.com/in/siddharthakhanal)

## SUMMARY

Backend Developer and Team Lead with a strong foundation in Python and Django ecosystems. Experienced in architecting scalable multi-tenant systems and leading development teams. Active open-source contributor with packages published on PyPI.

## EXPERIENCE

**Backend Developer & Team Lead** Jan 2025 – Present

*Hinomaru Tech — Kathmandu, Nepal*

- Leading the backend engineering team and overseeing architectural decisions for core products.
- Mentoring junior developers, conducting code reviews, and ensuring best practices in system design.

**Backend Developer** Jun 2024 – Dec 2024

*Freelance — Remote*

- Delivered custom backend solutions for diverse clients over a 6-month period.
- Specialized in optimizing database queries and integrating third-party APIs.

## EDUCATION

**Reliance College** Jan 2020 – Jan 2025

*Bachelor of Computer Application — Saraswatinagar, Kathmandu*

Final Year Project: TinyShop

**Reliance International College** Jun 2017 – Jun 2019

*+2 in Management (Computer Science) — Kathmandu, Nepal*

**Tarasadan English School** Apr 2017

*SLC / SEE — Kathmandu, Nepal*

## PROJECTS

**TinyShop** 2024

A Shopify-esque e-commerce framework allowing users to create isolated, custom storefronts.

- Implemented multi-tenancy using django-tenants and PostgreSQL multi-schema architecture.
- Engineered asynchronous task queues using Celery and Redis for efficient order processing.
- Built a dynamic templating engine supporting custom domains and user-defined themes.

*Technologies: Python, Django, django-tenants, PostgreSQL, Celery, Redis*

**Jamma** 2024

A proof-of-concept web analytics platform inspired by Plausible Analytics.

- Built a high-performance ingestion API using Django REST Framework.
- Implemented Celery workers to asynchronously process tracking events, ensuring non-blocking data collection.

*Technologies: Python, Django, Django REST Framework, Celery, Redis*

**Django SQLite Tenants** 2024

Published Python package for creating multi-tenant Django applications with SQLite.

- Available on PyPI.

*Technologies: Python, Django, SQLite*

## TECHNOLOGIES

Languages: Python, SQL, JavaScript, HTML/CSS, Nim

Frameworks: Django, Django REST Framework, Django Ninja, Celery, Svelte, SvelteKit

Databases & Tools: PostgreSQL, Redis, SQLite, Docker, Git, Linux

Cloud & DevOps: Cloudflare R2, Cloudflare Workers, D1, CI/CD (GitHub Actions), Nginx, Unicorn, DigitalOcean, S3
